Geology Major

www.Geology.Pitt.edu/Undergraduate

Revised: 05/2019

Geology is a scientific discipline that aims to understand every aspect of modern and ancient Earth. A degree in geology provides the diverse skills required to work in many different employment settings. For example, the acquired scientific and mapping skills are great for jobs in parks and forestry management, museum work, science education, urban and suburban planning, and jobs that involve natural resource issues. Within the field of geology, environmental and geotechnical jobs exist for people with BS degrees. A master's degree provides better job opportunities in those fields, as well as in oil and gas exploration, which can be enormously rewarding both intellectually and financially. A PhD provides additional employment options, especially in universities and government labs. Internships enable students to meet potential employers, learn about real world opportunities, and sample different types of work.

Geology deploys an interdisciplinary mix of physics, chemistry, biology, math, and natural science to understand the mysteries of nature. It focuses on the solid Earth (rocks, minerals, mountain belts, volcanoes, earthquakes, sedimentary basins, oil and gas deposits, etc.) as well as the history of life (paleontology) and its impact on the Earth. In recent decades, geologists have become increasingly concerned with the history of the Earth's climate, how the physical and chemical behavior of the oceans has changed over time, and how drifting continents and evolving life have interacted to control the composition of the atmosphere and oceans and hence to control global climate. Geologists also examine how human activities affect our environment, including the quality of air, water, and soil.

Geology majors have hiked the Appalachian Trail, gone backpack camping with at-risk youth in the Utah deserts, bicycled across North America, plumbed the depths of unexplored caves, and traveled to Mongolia in pursuit of summer research. Geology majors take a six-week summer field camp that features extensive hiking in the western U.S., Italy, New Zealand, or other places around the world. To see whether geology is a good major for you, try a geology class (GEOL 0040, 0800, or 0860) and the Physical Geology Lab (GEOL 0055). Make sure you are comfortable with the required chemistry, math, and physics courses.

Required courses for the Geology major

The geology major requires the completion of 67 credits distributed as follows.

Geology core requirements

One of the following

GEOL 0800 Geology
GEOL 0820 Natural Disasters
GEOL 0860 Environmental Geology

All of the following

GEOL 0055 Physical Geology Lab
GEOL 0060 History of the Earth
GEOL 1001 Mineralogy
GEOL 1003 Igneous and Metamorphic Petrology
GEOL 1015 Colloquium
GEOL 1020 Sedimentology and Stratigraphy
GEOL 1100 Structural Geology
GEOL 1960 Field Camp

Geology elective requirement

Students must complete nine credits of GEOL at the 1000 level or above.

Chemistry requirements

CHEM 0110 General Chemistry 1
CHEM 0120 General Chemistry 2

Mathematics requirements

MATH 0220 Analytic Geometry & Calculus 1 and
MATH 0230 Analytic Geometry & Calculus 2 or
MATH 0235 Honors Variable Calculus

Physics requirements

PHYS 0174 Basic Physics for Science and Engineering 1
PHYS 0175 Basic Physics for Science and Engineering 2

Additional requirement; one of the following

GEOL 1045 Statistics for Earth Science
MATH 0240 Analytic Geometry & Calculus 3
MATH 0250 Matrix Theory & Differential Equations
STAT 1000 Applied Statistical Methods

Grade requirements

A minimum GPA of 2.0 in departmental courses is required for graduation.

Satisfactory/No Credit option

No GEOL course that counts toward the major can be taken on an S/NC basis. No more than two of the non-geological science courses that count toward the major may be taken on an S/NC basis.

Writing (W) requirement

Students must complete at least one W-course in the major.

GIS certificate

The Geographic Information Systems certificate is a great opportunity to earn electives while acquiring a range of software and image analysis skills (aerial photos, maps, and satellite images) that are highly sought after by both public and private employers. Refer to the [Geographic Information Systems Certificate Web page](#) for classes and more information.

Checklist for the Geology major

Geology core requirements

One of the following

_____ GEOL 0800
_____ GEOL 0820
_____ GEOL 0860

All of the following

_____ GEOL 0055
_____ GEOL 0060
_____ GEOL 1001
_____ GEOL 1003
_____ GEOL 1015
_____ GEOL 1020
_____ GEOL 1100
_____ GEOL 1960

Geology elective requirement

_____ GEOL _____ (1000 level or above)
_____ GEOL _____ (1000 level or above)
_____ GEOL _____ (1000 level or above)

Chemistry requirements

_____ CHEM 0110 or CHEM 0710 (UHC)
_____ CHEM 0120 or CHEM 0720 (UHC)

Mathematics requirements

_____ MATH 0220
_____ MATH 0230 or MATH 0235 (UHC)

One of the following

_____ GEOL 1045
_____ MATH 0240
_____ MATH 0250
_____ STAT 1000

Physics requirements

_____ PHYS 0174 or PHYS 0475 (UHC)
_____ PHYS 0175 or PHYS 0476 (UHC)
